MEMORANDUM FOR: NSA/TCO

ATTENTION :

THROUGH :

SUBJECT : Search of Ak-Suat and Turgat, USSR

REFERENCE : NSA Requirement  
(NPIC Project N.1009-64)

25X1A

1. This memorandum is in response to your requirement requesting a 30 nautical mile search around Ak-Suat and Turgat, USSR, for evidence of electronic, military and missile deployment activities.

2. Good quality stereo photography was available for the entire area from Mission

25X1D

Three significant items of interest were noted within the general confines of the search area:

a. A known interferometer associated with the down-range activity of TEMIC (50-11N 65-14E).

b. A possible airfield landing facility capable of accommodating light aircraft (50-11N 65-14E).

c. A probable airfield landing facility at Turgat capable of accommodating medium (C-47, C 119 type) cargo aircraft. This field could be all-weather, as there is some evidence of a possible ILS system. Landing area is approximately 3,500 by 200 feet. (49-39N 63-29E).

There were no additional installations in the search area that could be identified as being military in nature.

3. This project is considered to be complete.
